ZOMATO FOOD DELIVERY

Tableau Dashboard and Sheets — Analysis Report

Metric	Value	Metric	Value
Total Orders	**2,70,100**	Avg Order Value	**Rs. 285**
Total Revenue	**Rs. 54.2 Crore**	Avg Delivery Time	**29.6 min**
Active Users	**1.8 Lakh**	Cities Covered	**10**

Prepared by: Divyanshu | Tool: Tableau | Dataset: Zomato Food Delivery | March 2026

Project Overview

This report presents a beginner-level Tableau analysis of Zomato's food delivery operations across major Indian cities. The project includes 6 individual worksheets and 1 combined dashboard, each designed to answer a specific business question about food delivery performance, restaurant revenue, cuisine preferences, and delivery efficiency.

The analysis covers 10 major Indian cities, 10 top restaurant chains, 8 cuisine categories, and a full 12-month trend view for 2023. This is an ideal beginner project to learn Tableau fundamentals including bar charts, pie charts, line charts, and KPI cards.

Main Dashboard — Zomato Analysis

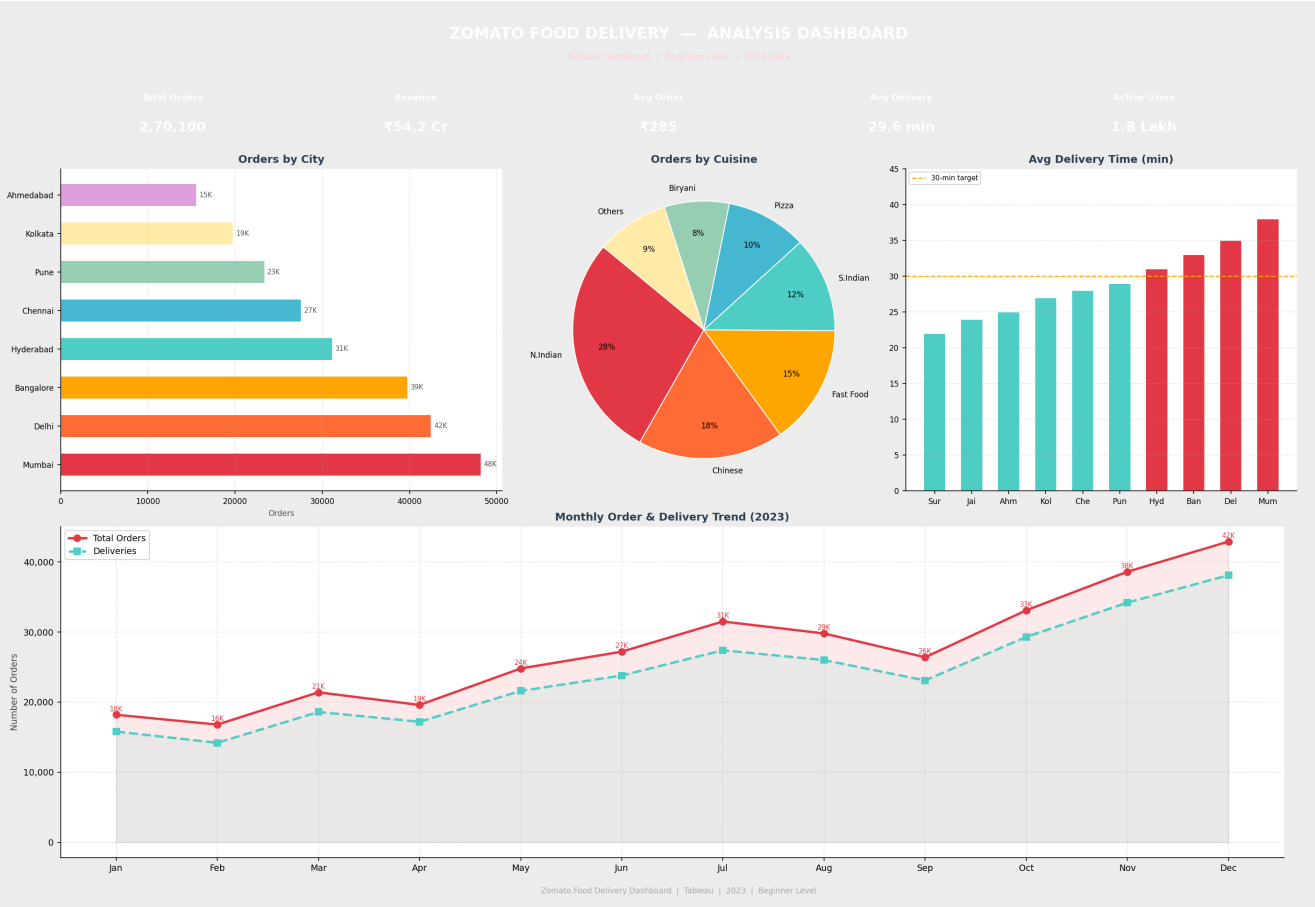

Figure: Main Dashboard — KPI Cards + Orders by City + Cuisine Pie + Delivery Time + Monthly Trend

Dashboard Description

The main dashboard is a single-page summary that brings all key visualizations together. It is structured into three rows — a KPI strip at the top, three charts in the middle, and a full-width trend line at the bottom. Interactive filters allow users to slice data by city and cuisine type.

KPI Strip: 5 headline cards — Total Orders, Revenue, Avg Order Value, Delivery Time, Active Users

Orders by City: Horizontal bar chart with Mumbai leading at 48,200 orders

Cuisine Distribution: Pie chart showing North Indian (28%) as the top cuisine

Delivery Time: Color-coded bar chart — red for cities above 30 min, teal for below

Monthly Trend: Dual line chart showing strong Dec peak driven by festive season

Sheet 1 — Orders by City

Horizontal Bar Chart	Dimensions: City | Measures: COUNT(Orders) | Color: City

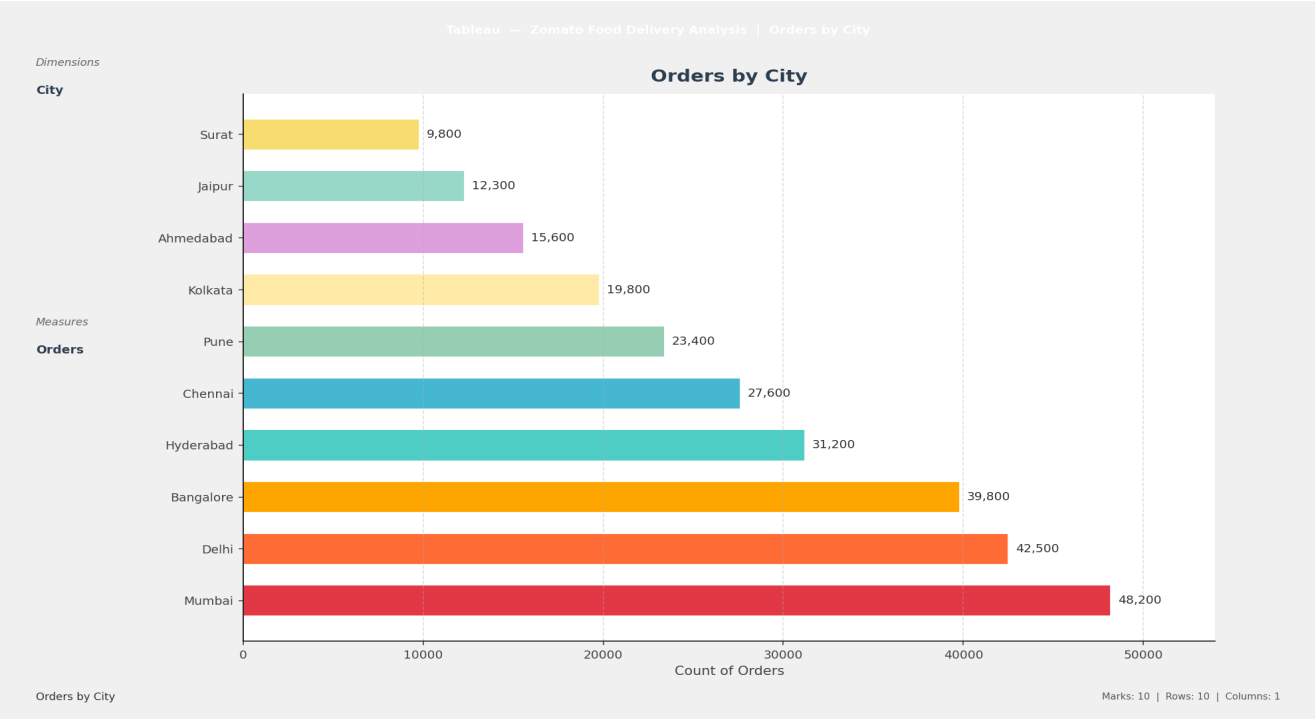

Figure 1: Sheet 1 — Orders by City

This worksheet ranks 10 Indian cities by total order volume. Mumbai leads with 48,200 orders, nearly 14% ahead of second-placed Delhi. Each bar is color-coded by city for quick identification. The horizontal layout makes long city names easy to read.

Key Observations:

* Mumbai dominates with 48,200 orders — highest among all cities
* Delhi is close behind at 42,500 orders
* Top 3 cities account for approximately 48% of all orders
* Surat has the fewest orders (9,800) reflecting a smaller user base

Sheet 2 — Top 10 Restaurants by Revenue

Horizontal Bar Chart	Dimensions: Restaurant Name | Measures: SUM(Revenue)

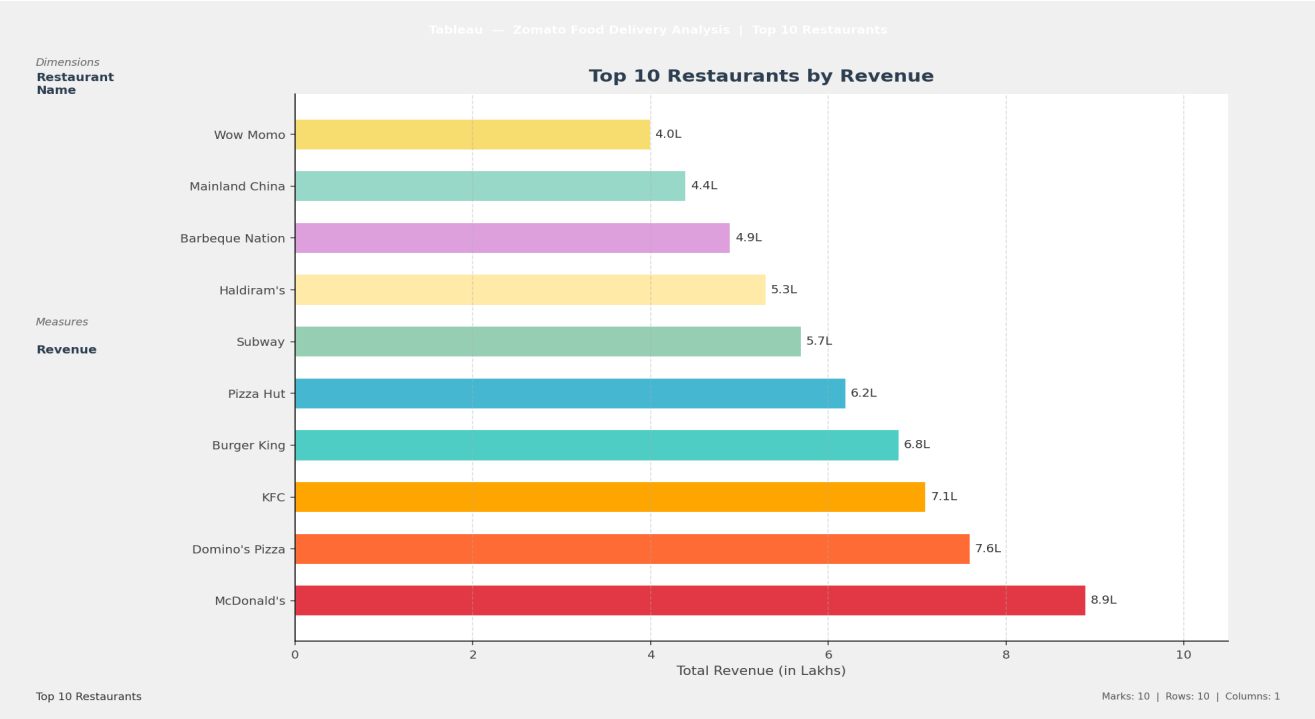

Figure 2: Sheet 2 — Top 10 Restaurants by Revenue

This sheet ranks the top 10 restaurant chains by total revenue on Zomato. McDonald's leads with Rs. 8.9 Lakhs, followed by Domino's and KFC. The chart clearly shows the dominance of fast-food and QSR chains on the platform.

Key Observations:

* McDonald's tops with Rs. 8.9 Lakhs in revenue
* Domino's Pizza and KFC closely follow at Rs. 7.6L and Rs. 7.1L
* Wow Momo is the only homegrown local brand in the top 10
* All top 10 restaurants together generate over Rs. 61 Lakhs

Sheet 3 — Orders by Cuisine Type

Pie Chart	Dimensions: Cuisine Type | Measures: COUNT(Orders)

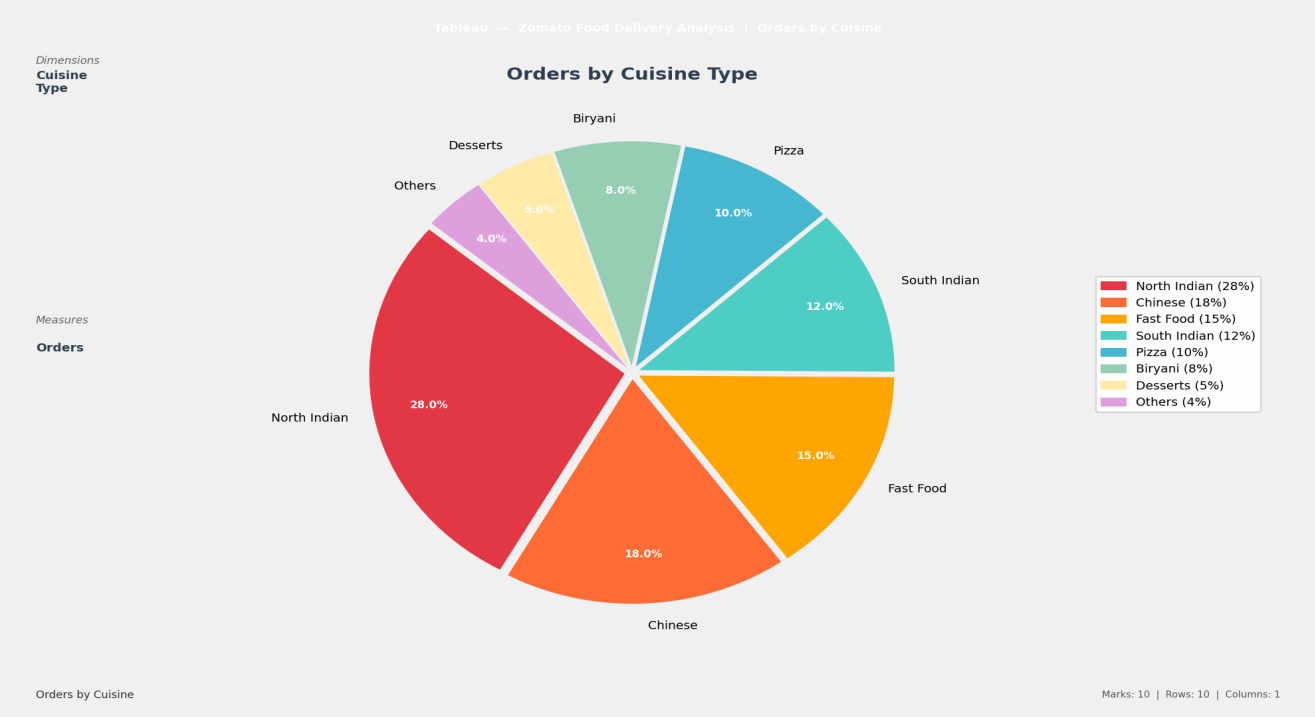

Figure 3: Sheet 3 — Orders by Cuisine Type

The pie chart breaks down total orders by cuisine. North Indian food dominates at 28%, reflecting the widespread preference for dal, roti, and curries. Chinese and Fast Food together form 33% of all orders, showing strong demand for comfort foods.

Key Observations:

* North Indian is the most popular cuisine at 28%
* Chinese ranks second at 18% — popular across all age groups
* Biryani at 8% ranks lower than expected given its nationwide popularity
* Desserts (5%) and Others (4%) form the tail of the distribution

Sheet 4 — Monthly Order Trend

Dual-Line Chart	Dimensions: Month | Measures: COUNT(Orders), COUNT(Deliveries)

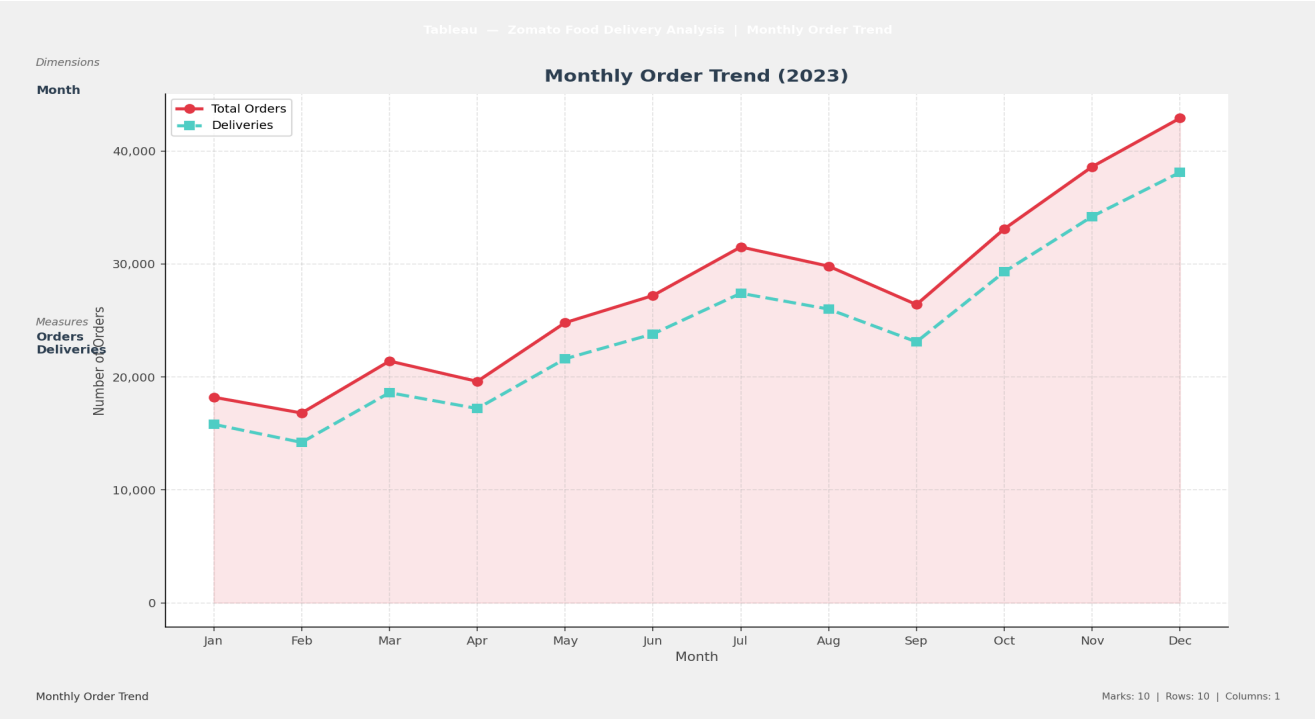

Figure 4: Sheet 4 — Monthly Order Trend

This worksheet tracks order and delivery counts month by month through 2023. Both lines show a consistent upward trend, with notable peaks in Oct-Dec driven by the festive season (Navratri, Diwali, Christmas and New Year).

Key Observations:

* December is the peak month with 42,900 orders
* February is the lowest at 16,800 orders — post-January slowdown
* Orders grew by 135% from February to December
* Delivery count consistently tracks just below total orders (undelivered/cancelled gap)

Sheet 5 — Average Delivery Time by City

Vertical Bar Chart (Color-coded)	Dimensions: City | Measures: AVG(Delivery Time) | Color: Above/Below 30 min

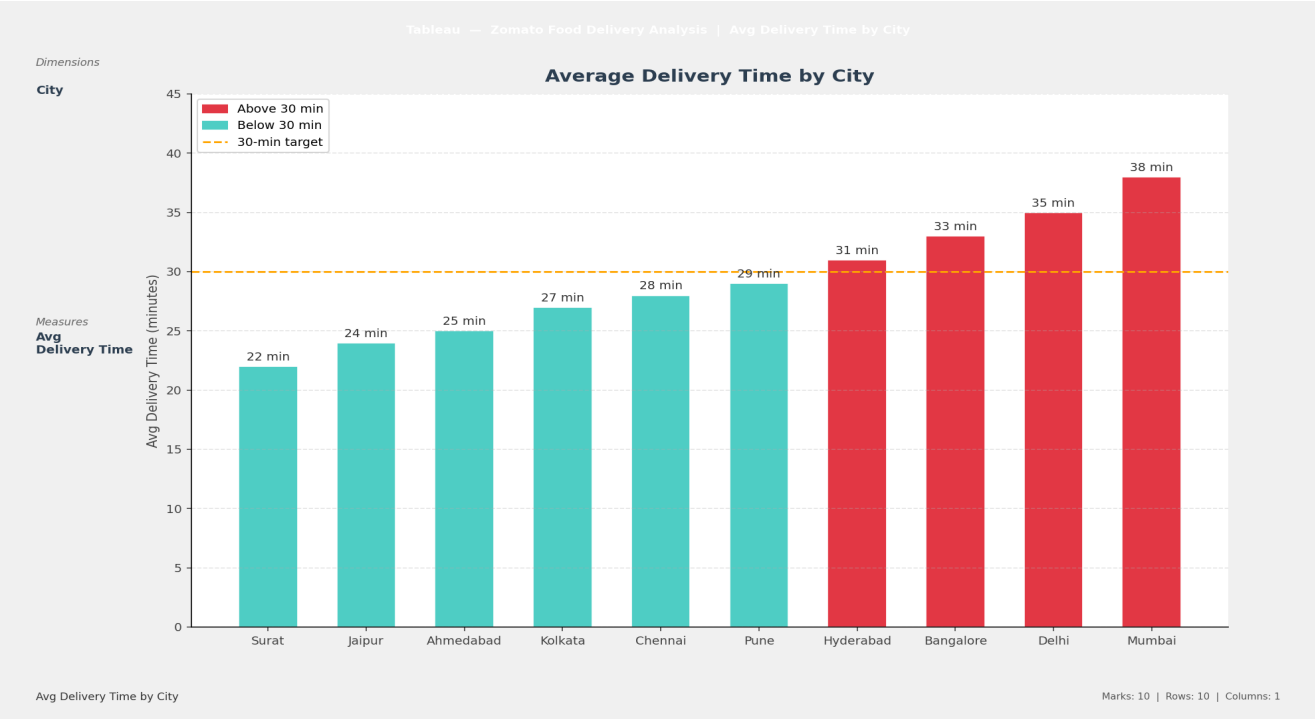

Figure 5: Sheet 5 — Average Delivery Time by City

This chart shows average delivery time per city with a 30-minute target reference line. Cities in teal are meeting the target; red bars indicate cities exceeding 30 minutes. This is a critical operational KPI for Zomato's logistics and delivery operations.

Key Observations:

* Mumbai (38 min) and Delhi (35 min) are the worst performers
* Surat (22 min) is the fastest — likely due to its compact city geography
* 5 out of 10 cities exceed the 30-minute delivery target
* High delivery times in metros are linked to traffic and longer travel distances

Sheet 6 — KPI Summary Cards

KPI Cards / Text Table	Measures: Orders, Revenue, Avg Order Value, Delivery Time, Active Users

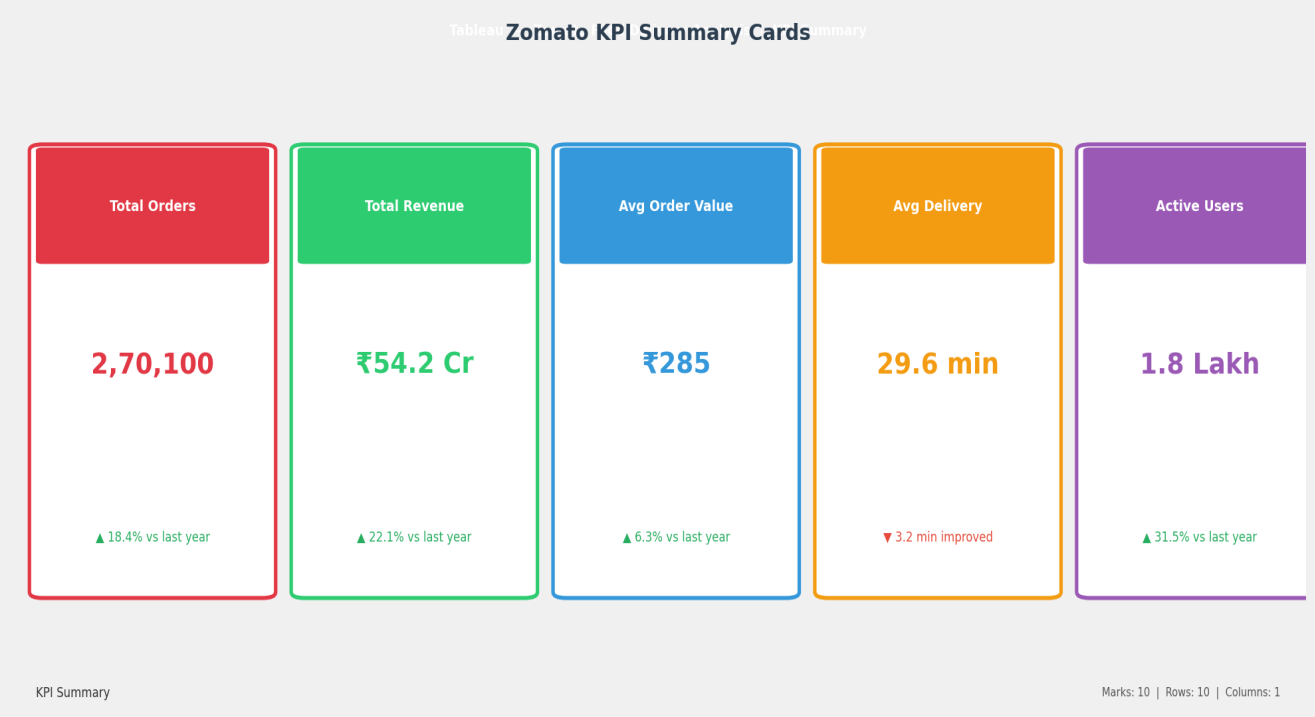

Figure 6: Sheet 6 — KPI Summary Cards

The KPI summary sheet displays the five most important headline metrics in a clean card layout. Each card shows the current value alongside year-over-year percentage change. This is the first sheet most executives and managers review in any business dashboard.

Key Observations:

* Total Orders: 2,70,100 — up 18.4% year over year
* Revenue: Rs. 54.2 Crore — up 22.1%, the strongest growth metric
* Avg Order Value: Rs. 285 — up 6.3%, indicating a premium ordering trend
* Active Users: 1.8 Lakh — up 31.5%, strongest user growth in the dataset

Summary and Key Insights

1. Mumbai and Delhi drive vol	These two metros account for nearly 34% of all orders. Any disruption here significantly i
2. North Indian cuisine dom	At 28%, North Indian food is the clear market leader. Restaurants in this category have t
3. Festive season is critical	Orders nearly double from February to December. Zomato should ramp up delivery partn
4. Metro delivery times need	Mumbai, Delhi, and Bangalore all exceed the 30-min target. Dark kitchens and hyperloca
5. Revenue growing faster th	Revenue growth (22.1%) outpacing order growth (18.4%) shows customers are ordering
